

Develop a simple web application that has following properties:

### **Public pages**

1. A form to collect photo and personal information about people.
2. Login form for system users to login to the system (signup form not in scope. Direct entries to the db are allowed)

### **Authentication Required:-**

3. List of submitted responses. To be shown in tabular form.

Columns:

- Photo
- Name
- Download

The list should be paginated, 5 records on a page

4. Download column should have a link which downloads all the submitted responses of the person in PDF format

### **Use the following technologies to implement the above**

- PHP

### **Use MySQL as the database**

Assume some sample data and populate it to demonstrate the functionality that has been coded. Usage of frameworks allowed.

### **What are we looking for**

- Your ability to write code that works
- How well you understand the requirements and how it translates to different methods in your code
- Your ability to take a task and complete it. We are big believers in perseverance and hard work.

What we are **not** looking for

- A good looking website or interface
- Any additional features than the ones mentioned

### **Output**

- Database should be exported in the repository as db.sql file
- The backend task should be submitted at [prasadjoshi70@gmail.com](mailto:prasadjoshi70@gmail.com) with a link to your github repository.
